Art Unit: 1714

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited "the reactive constituent" in line 3 of claim 1 lacks an antecedent basis, and "the reactive constituent has been first reacted in the melt with cross-linking" is confusing since the crosslinked reactive constituent would not be a cross-linkable hot melt adhesive.

The recited "the isocyanate" in claim 5 lacks an antecedent basis.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Applicant's Disclosure at page 3, lines 21-24 of the specification.

Applicant discloses that the use of silanized polybutadienes in micro-encapsulation is known and that their applicability in conjunction with isocyanates and amines was surprising at page 3, lines 21-24 of the specification. Thus, applicant's invention lacks novelty absent particular crosslinkers or other limitation.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Pat. 6,664,318 to Bymark et al teaches the use of the silanized polybutadiene in encapsulation of electronic components in abstract and at col. 8, lines 25-26, but does not recognize or suggest its use in encapsulating a crosslinker. US Pat. 6,344,238 to Schmitt et al teaches a double dot technology, but does not recognize or suggest the use of encapsulated crosslinker.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tae H Yoon whose telephone number is (571) 272-1128. The examiner can normally be reached on Mon-Thu.
